More power at the grill

New high-tech gadgets for perfect BBQ experiences

Laserliner presents exciting new products from its "BBQ & Outdoor" product line for the juicy enjoyment of meat from the grill.

Why do you actually need a barbecue thermometer if you could otherwise barbecue without one? Quite simply - because meat only achieves its perfect flavor when the core temperature is right.

Digital radio thermometer Thermocontrol Air

The smart radio barbecue thermometer Thermocontrol Air with 2 sensors works 100% wirelessly. Via smartphone, users can be conveniently notified as soon as the meat has reached the desired core temperature.

Cook two pieces of meat in parallel with the Thermocontrol Duo

Cook two pieces of meat in parallel - the practical Thermocontrol Duo with its plug-in sensors makes it possible. With one click, the display can be conveniently attached magnetically to the oven or grill.

Analog barbecue thermometer Thermomaitre: Perfect for beginners

Analog barbecue thermometers are child's play to use and the easiest way to measure core temperature. The all-rounder Thermomaitre scores with high-speed sensor technology for a particularly short measuring time. By displaying the optimum cooking degree for beef, pork, lamb, chicken and fish, the user has a direct comparison. A handy housing with an attractive design and the large LC display make it easy to use.

New trend: plancha grilling

Plancha grilling originated in Spain. Vegetables, fish, seafood and, of course, meat are grilled on a plancha. The preparation is gentle and particularly aromatic. In order to be

able to touch the hot plate later, Laserliner developed the infrared measuring device Thermospot, which determines the surface temperature of the plancha and thus provides information about when it can be taken off the grill.

For night-time barbecue fun: NovaMaster barbecue and outdoor lamps

Until now, it has been difficult to grill in the dark. Laserliner now puts an end to this, because with the robust, bright NovaMaster lamps, the barbecue party can now also take place late in the evening or at night.

The NovaMaster 200 headlamp ensures free hands and high wearing comfort for any activity. The light head can be tilted in steps of up to 90 degrees.

Those who prefer to attach the flashlight directly to the barbecue can opt for the NovaMaster 500 LED flashlight with four selectable light levels.

The NovaMaster 800 conjures up a real floodlight with up to 800 Lm. But that's not all, the light head can also be rotated 360 degrees and angled 180 degrees. There are also mounting options on the grill with magnet and hook. There certainly cannot be more power at the grill, can it?

The barbecue thermometers from Laserliner: Thermomaitre, Thermocontrol Air and Thermocontrol Duo. (from left to right)

New in the range: The infrared temperature measuring device Thermospot and the wood moisture measuring device Woodtester.

With the Thermomaitre, the core temperature can be determined in seconds. To determine the correct cooking point, just look at the table located on the device.

The Thermocontrol Air is an app-controlled barbecue thermometer.

About Laserliner:

Laserliner is a division of Umarex Germany. The brand stands for modern measuring technology, which is characterized by high quality in daily use. Founded in 1993, Laserliner developed the first affordable laser water levels in Europe.

The development of solutions for the construction site in the field of measuring and testing has always been the main focus. With fresh innovation Laserliner reinterprets the classics 'measuring, locating, leveling'. From the product line for professionals, further lines for work & leisure have been developed.

New from LASERLINER is the first own tool brand 4K5: <https://www.4k5tools.com/>
