

## WoodTester Compact

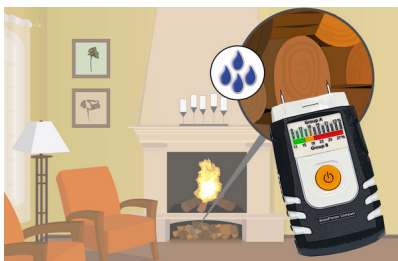

### Compact wood moisture measuring device

With the WoodTester Compact, the dryness level of firewood can be determined exactly. This allows effective energy consumption and a reduction of pollutants. The measuring instrument distinguishes between wood groups, is easy to operate and has a sturdy housing.

- Effective reduction of energy and pollutants through precise determination of the dryness level of firewood
- Dual scale for differentiating between wood groups
- Simple testing of the measuring instrument using reference measurement through the protective cap
- Energy-saving Auto Off function when not in use
- Battery status visible at all times through low battery display
- Simple one-button operation
- Sturdy, ergonomically designed housing

#### TECHNICAL DATA

<b>Measured Variable</b>	Moisture content of material (resistive)
<b>Mode</b>	Wood (2 groups)
<b>Measuring Range Wood</b>	Wood group A: 9% ... 24% Wood group B: 11% ... 28%
<b>Accuracy (Absolute) Wood</b>	± 2%

#### SCOPE OF DELIVERY

9V
