

# ThermoSpot One

Non-contact infrared temperature instrument with integrated laser

The non-contact measuring method is ideal for non-destructive temperature measurement on sensitive surfaces and safe measurement in hazardous applications. The target laser allows the test area to be precisely selected and visualised. The highest value determined is shown on the illuminated LC display and the auto-hold function allows the most recent value to be temporarily saved.

- Non-contact, non-destructive measurement, ideal for sensitive surfaces
- Safe measurement in hazardous applications, for example moving machine parts
- Measuring range can be clearly pinpointed thanks to target laser
- Emission coefficient: 0.95
- Optics 12:1
