

MoistureFinder Compact

Material moisture meter for non-destructive measurements of wood and building materials - recycled material used for sustainability

This material moisture meter enables damage-free measurement of wood and building materials. The device has four selectable material characteristics for soft woods (e.g. spruce, pine), hard woods (e.g. beech, oak), plaster and cement screed. The wet/dry indicator has twelve coloured LEDs and provides immediate information on the degree of moisture or dryness in the material under inspection. If wet material is detected, the user is warned with an additional acoustic signal. The hold function allows the last measured value to be retained by pressing a button on the display. It switches off automatically after not being used for three minutes. The housing is largely made of recycled material, making a valuable contribution to sustainability.

- Sustainable design: large proportion of the housing is made from recycled plastic
- Non-destructive measurement of material moisture
- Easy to use: select the material then measure by placing the device on the surface
- Versatile use due to four selectable material characteristics: softwoods, hardwoods, plaster and cement screed
- Immediate information on the degree of moisture or dryness of the measured material on an LED display

TECHNICAL DATA	
Measured Variable	Moisture content of material (capacitive)
Mode	Wood (2 groups) Building materials (2 materials)
Measuring Range Wood	Softwood: 6.7% 51.4% Hardwood: 3.8% 31.6%
Accuracy (Absolute) Wood	± 2%
Measuring Range Building Materials	Cement screed: 0% 5% Plaster: 0% 23.5%
Accuracy (Absolute) Building Materials	± 0.2%
