

FlexiCamera Set mit VCM

Professional video inspection system inclusive universal micro camera with very small camera head

The professional video inspection system, consisting of VideoControl-Master and FlexiCamera, is suitable for the visual inspection of hard-to-reach places. The versatile base unit has a large, high-resolution colour display, allowing for detailed image analysis. An integrated image and video recording function with snapshot option is used for documentation during an ongoing recording. The zoom function allows the magnification range to be adjusted. The image can be manually rotated in 90° increments and is always available to the user in a suitable position. The current image can be compared with a reference image. Data can be saved and transferred via the exchangeable SD memory card and the USB 2.0 interface. Thanks to the extremely compact camera head made of stainless steel and the flexible push cable, the FlexiCamera is ideal for inspecting cavities, shafts, masonry or vehicles.

- Effective troubleshooting in manufacturing and the construction industry
- For inspecting highly inaccessible locations such as cavities, shafts, masonry or in vehicles
- Easy comparison with reference image
- Integrated image and video capture function

TECHNICAL DATA

Diameter Camera Head	4 mm
Camera Resolution	640 x 480 pixels
Field of View (FOV)	56°
